

ElectroChemiLuminescence System

Ref. STAT-ECL

STAT-ECL is a portable BiPotentiostat/Galvanostat combined with a specific Electrochemiluminiscence (ECL) Cell that performs **ELECTROCHEMILUMINESCENCE** studies with **DropSens Screen-Printed Electrodes** (SPEs). A **BiPotentiostat/Galvanostat** (± 4 V DC potential range, ± 40 mA maximum measurable current) and a **Si-Photodiode** integrated in the ECL Cell (Spectral response range: 340 - 1100nm) are combined **for the first time in the market** for offering simple, compact and portable solution in the field of ELECTROCHEMILUMINESCENCE to be used with SPEs.

The BiPotentiostat/Galvanostat is the instrument in charge of starting the ECL reaction by applying voltage or current pulses. Electrochemical and Chemiluminescence responses are perfectly synchronized and shown in real time.

The equipment can also be used independently as a Bipotentiostat/Galvanostat (EC mode) with all the functionalities of the well-known **DropSens** instruments.

STAT-ECL is controlled by the **DROPVIEW 8400** software, providing powerful functions such as:

- Remote control of the amplification for ECL signals (with x1, x10 and x100 gain).
- Plot overlay, peak integration, smoothing, subtraction, derivative curve, baseline fitting, etc.
- Script editor for programming specific work routines.
- Real Time dual axis plot to show at same time the ECL signal and the electrochemical measurement.
- 3D plotting of curves.
